

(amended)

BRIEF DESCRIPTION OF THE DRAWINGS

The present invention can be more fully understood by reading the subsequent detailed description in conjunction with the examples and references made to the accompanying drawings, wherein:

Fig. 1A shows a pulse signal at the front of the signal scanning line;

Fig. 1B shows the transformed pulse wave at the end of the scanning line;

Fig. 2 shows a pulse signal at the end of the signal scanning line;

Fig. 3 shows the I/O signal waveform of the circuit in Fig.2;

Figs. 4A and 4B show the pulse wave provided to the gate of the TFT on the scanning electrode by the circuit in Fig.2;

Fig. 5 shows the circuit of the device used in the embodiment of the present invention to eliminate the flickering of the TFT-LCD;

Fig. 6 is the I/O waveform generated by the circuit in Fig. 5; and

Fig. 7 shows the pulse signal provided to the gate of the TFT of the scanning line according to an embodiment of the present invention.
